

Desipramine

General:

Desipramine belongs to the tricyclic antidepressants, which are comparable to phenothiazines regarding absorption, distribution and metabolism. Desipramine predominantly blocks the admission of norepinephrine into the presynaptic nerve ending. Desipramine's half-life is 12-77 hours. The metabolites of desipramine are also therapeutically effective. The main field of application is treatment of depressions of different etiology.

Indication: Therapy monitoring

Material: 1 ml serum

TAT: 7-10 days*

Method: LCMS

Units: µg/l

Ref.- range: 100 - 300
