

Perazine

General:

Perazine is a neuroleptic drug from the group of the phenothiazines. It has an anti-psychotic, calming as well as a sedating psychomotor effect.

Perazine is used to treat acute psychotic syndromes with delusion, hallucination, incoherence, depersonalization, catatonic syndrome, chronic endogenous and exogenous psychoses. Furthermore perazine is used for distinct aggressiveness and agitation.

Like all phenothiazines, perazine blocks the D2-Receptor as well as the noradrenalin and histamine receptor.
