

Tolperisone

General:

Tolperisone is a drug for the treatment of neuro-muscular spasms. Spasticity refers to permanent muscular contractions which have a major impact on patient mobility. Spasticity may be associated with congenital or acquired disorders such as multiple sclerosis, cerebro-cranial traumas, cerebral sclerosis, amyotrophic lateral sclerosis or can arise as a result of suffering from a stroke.

LCMS

Material: 1 ml serum

TAT: 5-7 days*

Method: LCMS

Units: ng/mL

Ref.- range: see report
