

Gold Au

General:

Metals such as gold and silver can provoke pharmacological and toxic effects in soluble or colloidal form. Treatment of chronic rheumatism with gold preparations is based on the inhibition of mesenchymal reactions by gold. Side effects: exfoliative dermatitis, stomatitis, glomerulonephritis, thrombocytopenia, agranulocytosis, liver and kidney damage. After a longterm gold therapy the generalized deposit of gold sulfide can appear in the subcutis without clinical complaints (auriasis).

Indication: Gold therapy

Material: 1 ml serum

TAT: 10-14 days*

Method: IMPS

Units: mg/L

Ref.- range: see report
